

Vulcan Utility Signs Introduces New Durable I.D. System

Vulcan Utility Signs, Foley, Alabama

November 1, 2010

The newly-developed Durable I.D. System from Vulcan is the latest innovation used to permanently mark valves, meters, filters, regulators, and any designated flanged marker. These fit-for-purpose identifiers are manufactured using anti-corrosive stainless steel and are designed to be mounted securely to flanged fittings that exist on above-ground pipe. Vulcan's unique design allows the identifiers to be adapted to any size pipe.

The Durable I.D. System is available in two distinct styles to maximize customization options.

- 1) Cut-Out Version- The cut-out version displays laser-cut characters in a stencil-style font.
- 2) Enhanced Version- The enhanced version utilizes the benefits of outdoor-durable, nighttime-reflective vinyl and allows for more customized messages.

The identifiers are easily mounted to existing flanges using nut-on-nut installation. This multi-purpose marking solution can be manufactured to coordinate with your SHRIMP and/or DIMP Operations Manuals so that valves are clearly identifiable in any environment, ensuring compliance and safety at all times.

These identifiers never need maintenance and can be easily covered each time maintenance painting occurs on the pipe. Simply uncover the identifier after the pipe is painted and information is readily visible with no replacement necessary!

Call or click today to find out why Vulcan Utility Signs is the marking solutions expert!
