

Vulcan Utility Signs Chosen to Mark El Paso Corporation's Ruby Pipeline

Vulcan Utility Signs, Foley, Alabama

August 30, 2010

Vulcan Utility Signs, the top manufacturer of outdoor-durable marking products, has been chosen to mark the 680 mile stretch of El Paso Corporation's Ruby Pipeline. The 42" underground pipe will run from Opal, Wyoming to Malin, Oregon. The line will include four compressor stations which will also be marked by Vulcan.

Through years of collaborative efforts, El Paso Corporation, parent company for the Ruby Pipeline, and Vulcan have developed a long-standing partnership built on quality, service and respect. This relationship led to the decision to award Vulcan Utility Signs the marking portion of the project.

To protect the pipeline, Vulcan High Density Polyethylene (HDPE) Bullet Markers will be used. The Vulcan Bullet Marker provides ultimate visibility with a true 360° WARNING message. These markers will be screen printed with Vulcan's specially formulated Color Matched Component Ink System, providing maximum longevity of the message. Vulcan's unique Bent Style Aerial Markers and Aluminum Compressor Station Signs will be used as future marking solutions. The aluminum used for all signs is 5052 alloy, which is manufactured on Vulcan's 30-acre campus. This particular alloy is the metal specified in most states for road signs due to its strength, durability and non-corrosive properties. The 811- Know What's Below, Call Before You Dig symbol, has also been integrated into the design of the marking system to ensure an easy, call-to-locate process.

Vulcan line marking products have been tested by the toughest standards in the industry, making their fit-for-purpose marking solutions the recommended choice when it comes to marking the rugged terrain of the Ruby Pipeline. Each product in the innovative Vulcan product line is 100% customizable. Vulcan also has the knowledge and experience to provide resourceful answers to all of your marking concerns.
